

Assemble

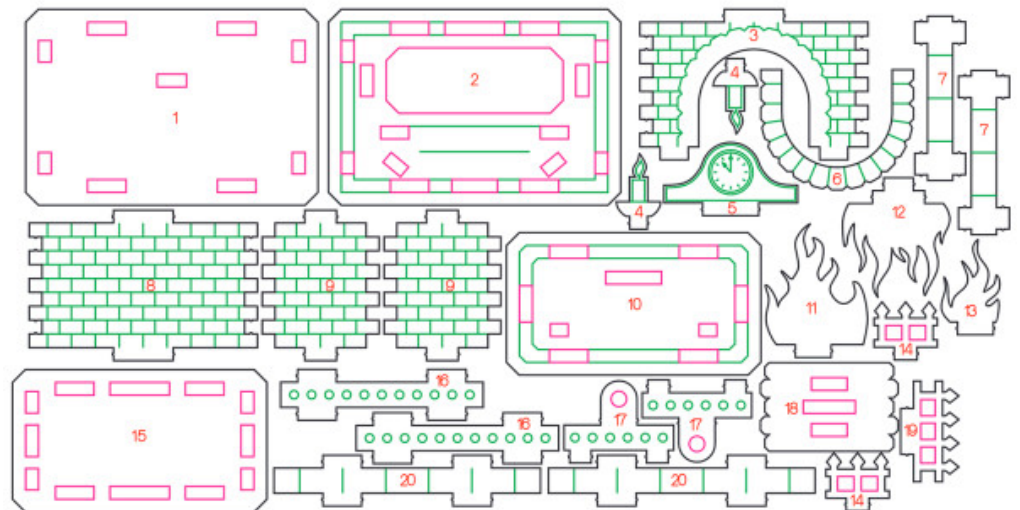

Fireplace

Things You'll Need:

- Wood Glue
- No tools needed

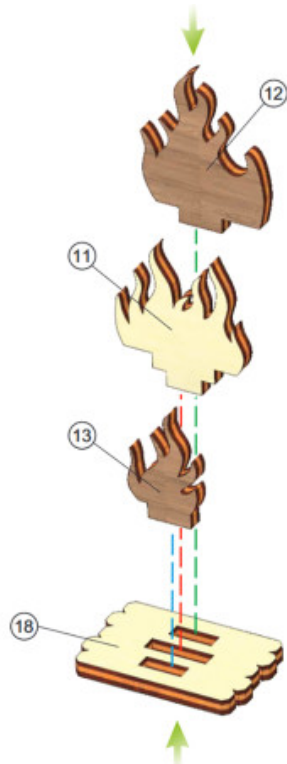

Pieces are made to fit snugly to minimize glue usage. They may require a very firm press to fit together.

1 Gather and Identify Materials

Gather and Identify Materials

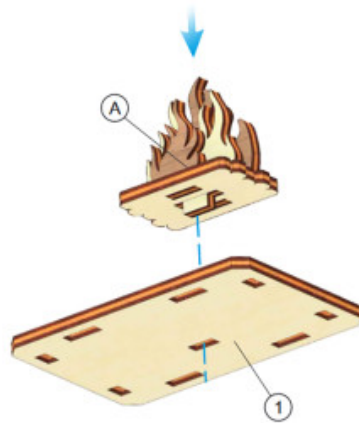

2 Assemble Fireplace - Flames

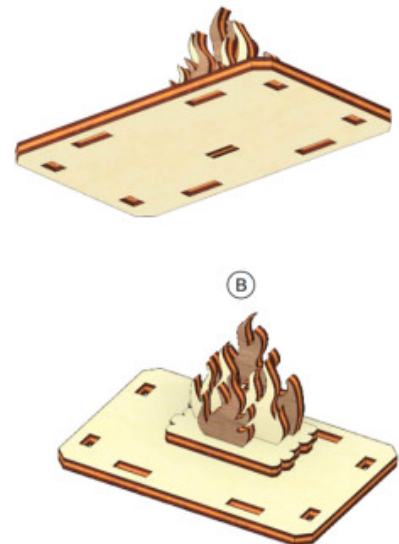

Fit piece 13 (foreground), piece 11 (middle), and piece 12 (background) into slots of piece 18 as shown to construct "A" group

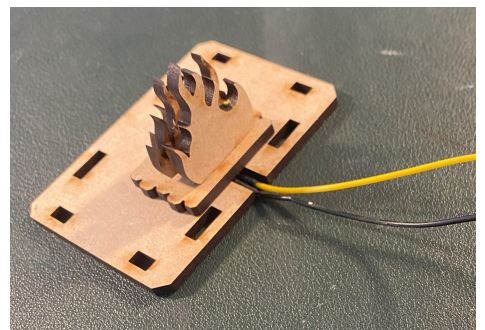

If assembling led lighting - piece 11 will have a strip cut out. affix the led diode inside this strip and secure with glue. wires should protrude from bottom of piece.

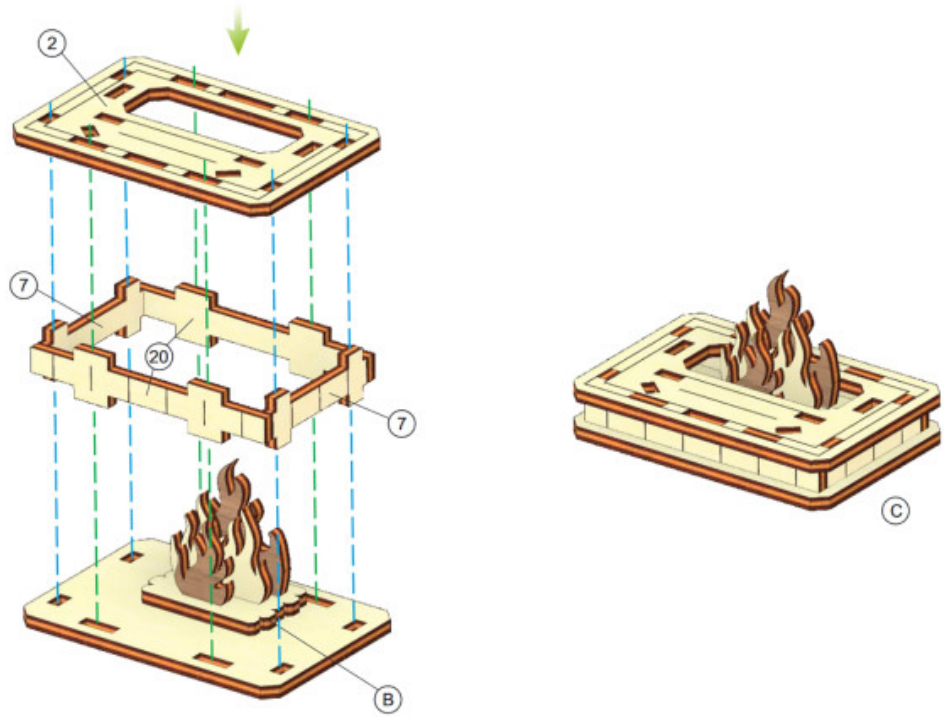

If assembling lighting - piece 1 will have a strip cut out. trail the wires from the led diode light through this strip and continue regular assembly. Use glue as needed to secure the diode and wires.

Fit group "A" to slot openings of piece 1 as shown to construct group "B"

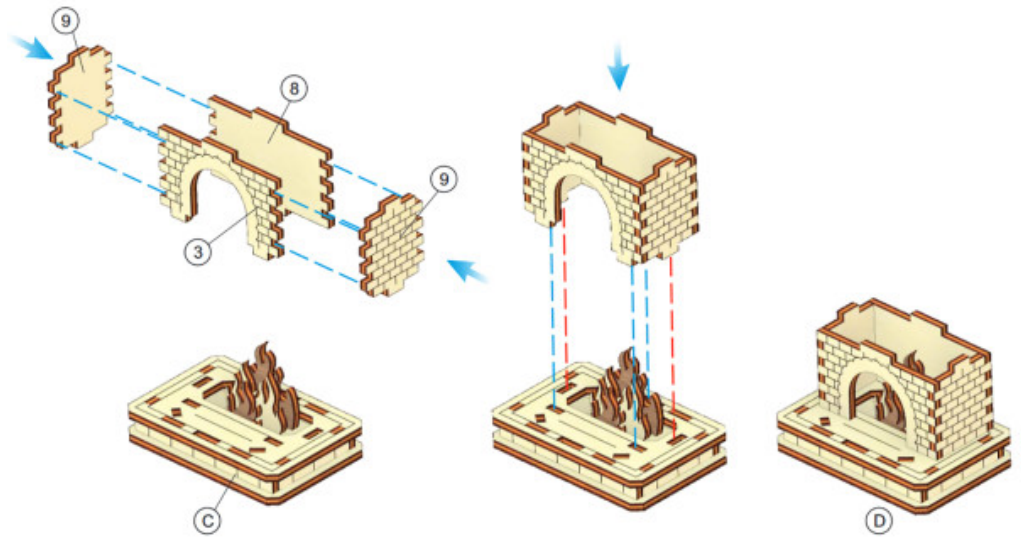

3 Assemble Fireplace - Hearthstone

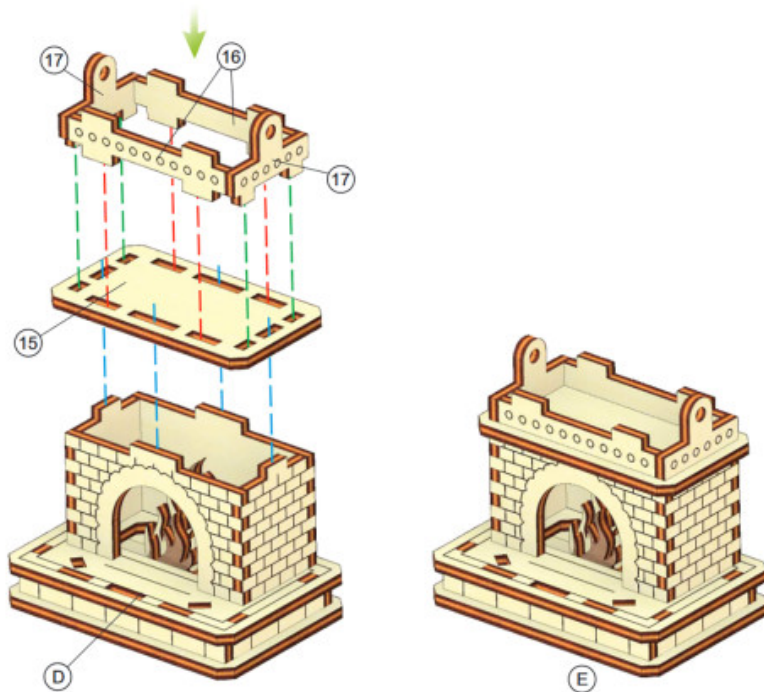

Fit pieces 20 and 7 to group "B" slot holes as shown. Fit piece 2 to tabs of pieces 20 and 7 to finish constructing group "C"

4 Assemble Fireplace - Walls —

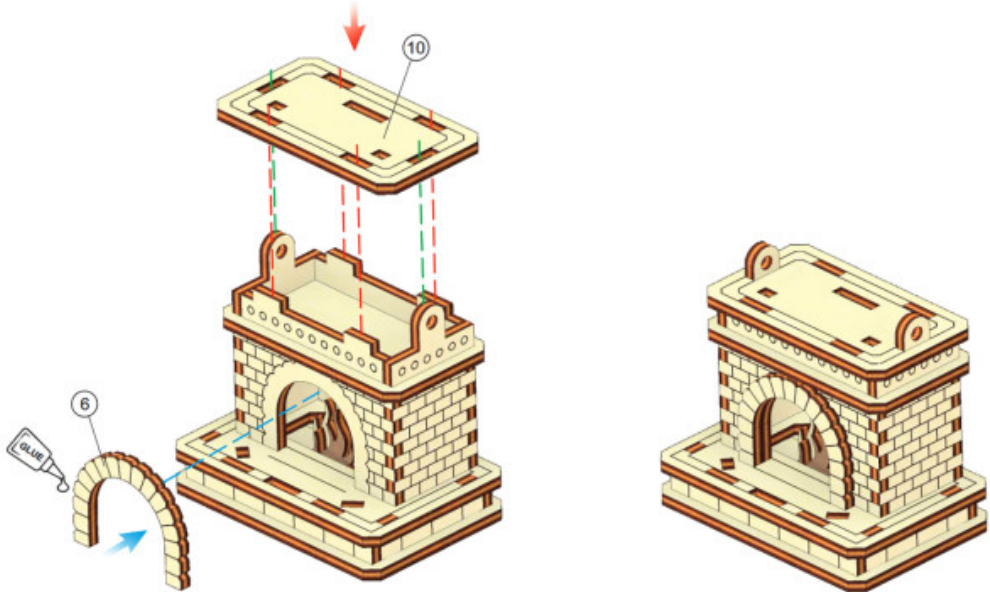

Fit brick wall pieces 3, 8 and 9 to slot holes of group "C" to make group "D"

5 Assemble Fireplace - Mantle

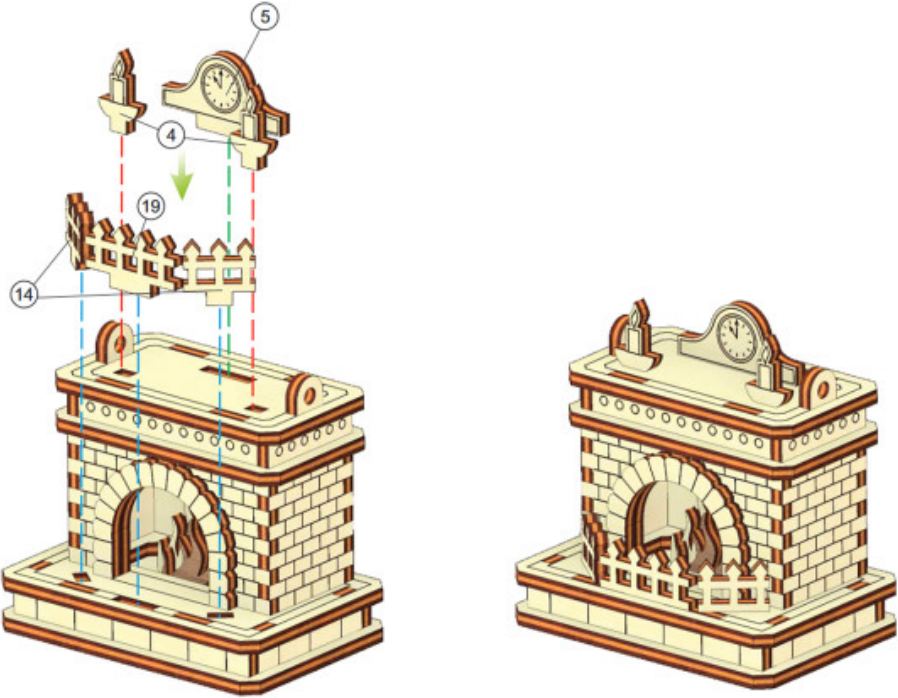

Fit piece 15 to tabs of group "D" as shown. Fit pieces 16 and 17 to slot

holes of piece 15 to construct group "E"

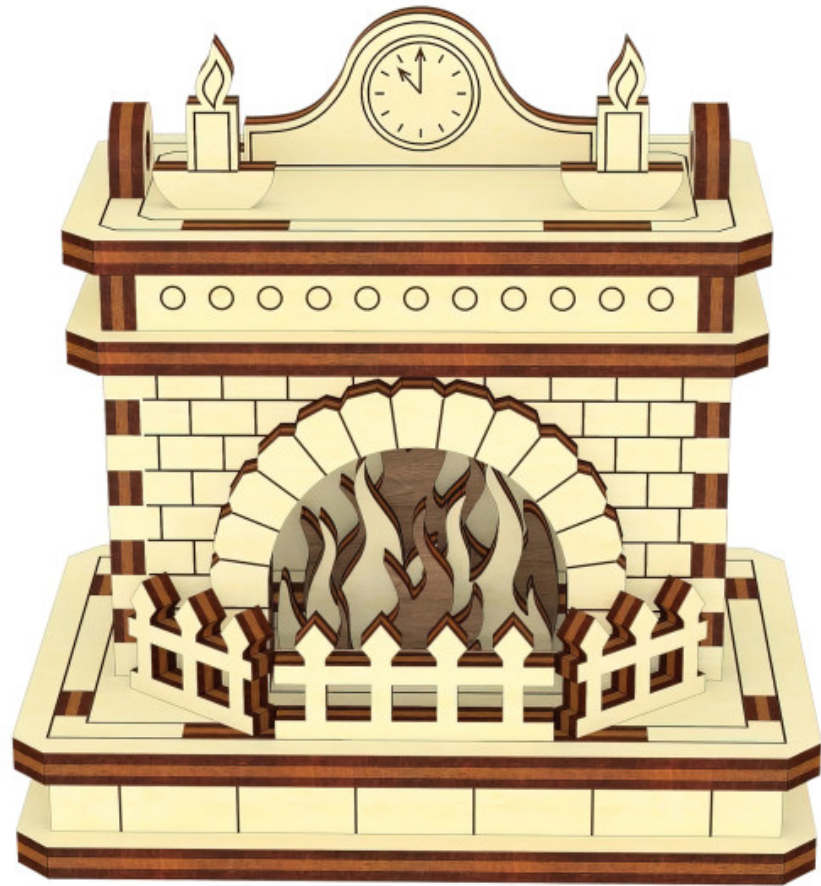

Fit piece 10 on top of group "E" . Glue piece 6 to front of fireplace as shown.

Fit clock, candles, and fireplace fence pieces to remaining slot holes of group "E" as shown.

6 Finished Fireplace

If LED lighting kit version was purchased - the wiring comes pre-assembled using lever nuts - so no soldering is required. If the wires need to be disconnected for assembly purposes - here is the original assembly for you to follow to hook them up again. The wires and light has be pre-tested and sent out in working order. Sometimes the wires need to be "re-connected" to the lever nuts to make sure they have a solid connection.

To connect and disconnect wires from lever nuts - flip up the orange levers and pull wire out/in. Flip the orange lever down to secure wire.
